P/N - ASP-1x4

Quick Start guide

The 1 x 4 audio splitter is very easy to install and needs no configurations. All connections use standard 3.5mm stereo audio cables. You will need a stereo audio cable to connect the computer's audio output port to the Common port on the audio splitter and a cable for each set of stereo speakers.

If an audio source other than a computer's audio output is used, make sure the audio signal levels are within the same limits as a computer's audio output.
